

VETERANS RESURGENCE PROJECT

Partner Briefing Package & Tactical Talking Points | Version 1.4 Baseline

DOCUMENT 1: EXECUTIVE BRIEFING LETTER TO POTENTIAL PARTNERS

To: Prospective Strategic, Timber, and Agency Partners

From: Donald Laroy "True" Truex, Founder & Field Operations Director

Subject: Invitation to Collaborate: Public-Private Land Stewardship Framework

I am writing to formally introduce the **Veterans Resurgence Project (VRP)**, an asset-light, high-utility operational framework designed to meet two critical needs in Linn and Benton Counties: accelerating regional watershed restoration and wildland fire fuel-load reduction, while simultaneously providing disciplined, peer-led transitional employment pipelines for local military veterans.

Operating out of our central staging hub at Waterloo County Park, VRP has built a highly structured, accountable field model that delivers immediate economic and environmental value to our partners. We operate under a 100% management salary deferral model, ensuring that every dollar of partner capital, grant funding, and public allocation goes directly into field-level veteran stipends and critical safety operations.

We are seeking direct collaborations in three specific sectors:

- 1. Regional Timber Operators:** We act as a specialized tactical service provider. Our crews manage manual hand-piling, brush clearing, technical spacing, and post-harvest erosion seeding, preparing tracts ahead of your machinery or stabilizing slopes behind them.
- 2. Academic & Resource Institutions:** Through our unique university work-study split, our field logistics are backed by real-time UAS drone data syncs and objective behavioral metrics, providing transparent verification of all conservation goals.
- 3. Land Managers & Municipal Agencies:** We offer a proven 'labor-for-rent' exchange that transforms intensive manual conservation needs into viable land-tenure capital without requiring heavy equipment outlays.

We invite your organization to review our integrated operational baseline and join us in restoring both our local landscapes and the transition pathways of those who served. I am available to meet immediately to review our structural master plans.

DOCUMENT 2: REGIONAL TALKING POINTS & FREQUENTLY ASKED QUESTIONS

What is the core mission of the Veterans Resurgence Project?

VRP delivers a dual-benefit civic model. We provide military veterans with transitional field employment, peer stabilization, and certifiable forestry skills by executing critical fuel-load reduction, wildfire mitigation, and watershed restoration projects throughout Linn and Benton Counties.

How does the 'Asset-Light' model protect partner capital?

VRP strictly prohibits the purchasing, leasing, or maintenance of heavy yellow-iron commercial logging machinery. By eliminating heavy capital liabilities, all operational capital is preserved for personnel stipends, safety clothing (PPE), and technical training. We complement, rather than compete with, commercial logging operations by managing the labor-intensive hand-piling, spacing, and bank stabilization work.

What mechanisms guarantee field safety and accountability?

Our field lines are governed by a rigid paramilitary operational structure under direct tactical command. Crews engage in mandatory 0800 daily muster, full physical PPE audits, and active Oregon Department of Forestry (ODF) fire hazard level synchronization. Furthermore, field safety is enforced through our 60-Second Field Assembly Test to objectively verify physical fitness-for-duty daily.

How are participant funds and behavior managed?

All funding is routed through our target non-profit fiscal sponsor, Lomakatsi Ecological Services. Participant stipends are explicitly governed by a 100-Point Merit Ledger tracked by specialized work-study assets. Stipends only vest upon hitting strict field benchmarks during set seasonal windows (Sept 1-15 / Jan 1-15), ensuring continuous workforce retention during high-risk forestry seasons.

DOCUMENT 3: THE VRP VALUE PROPOSITION GRID

- **Zero-Rent Public Land Tenure:** Handled via direct service-exchange pacts. VRP delivers standard market-rate manual forestry services (valued at \$1,500/acre for fuel reduction) in exchange for zero-cash staging access.
- **Complete Overhead Suppression:** 100% management salary deferral guarantees maximum fiscal efficiency for donors and sponsors.
- **Advanced Geospatial Tracking:** Every cleared acre is aerially mapped and tracked using weekly UAS drone telemetry managed by specialized IT work-study technicians.
- **Strict Privacy-Compliant Accountability:** Peer engagement logs record objective behavioral performance metrics, completely omitting clinical diagnostics to ensure data safety and veteran trust.
